

F924A6

Harmony 6" Rain Shower Head on Angled Arm

artos®

INSTALLATION GUIDE

F924A6

Harmony 6" Rain Shower Head on Angled Arm

artos®

OPERATING SPECIFICATIONS

OPERATING TEMPERATURE

Maximum: 176°

OPERATING PRESSURE

Minimum: 15psi

Maximum: 75psi

Recommended: 25psi-70psi

Above 90psi, it may be necessary to install a pressure reducer

FLOW RATE

1.8 USGPM

INLET/OUTLET CONNECTIONS

1/2" NPT

MATERIAL

Solid Brass

REQUIREMENTS

This unit requires a control

FEATURES

Easy Clean Jets

PRODUCT DIMENSIONS

PRODUCT SKU: F902-3TR

STEP 1

Safety Warnings

- Shut off the main or local water supply before beginning installation.
- Use caution when handling sharp tools and metal parts.
- Do not overtighten connections, as this may damage components or create leaks.
- Ensure the psi of the local water supply remains in the recommended psi range on the operating specifications page

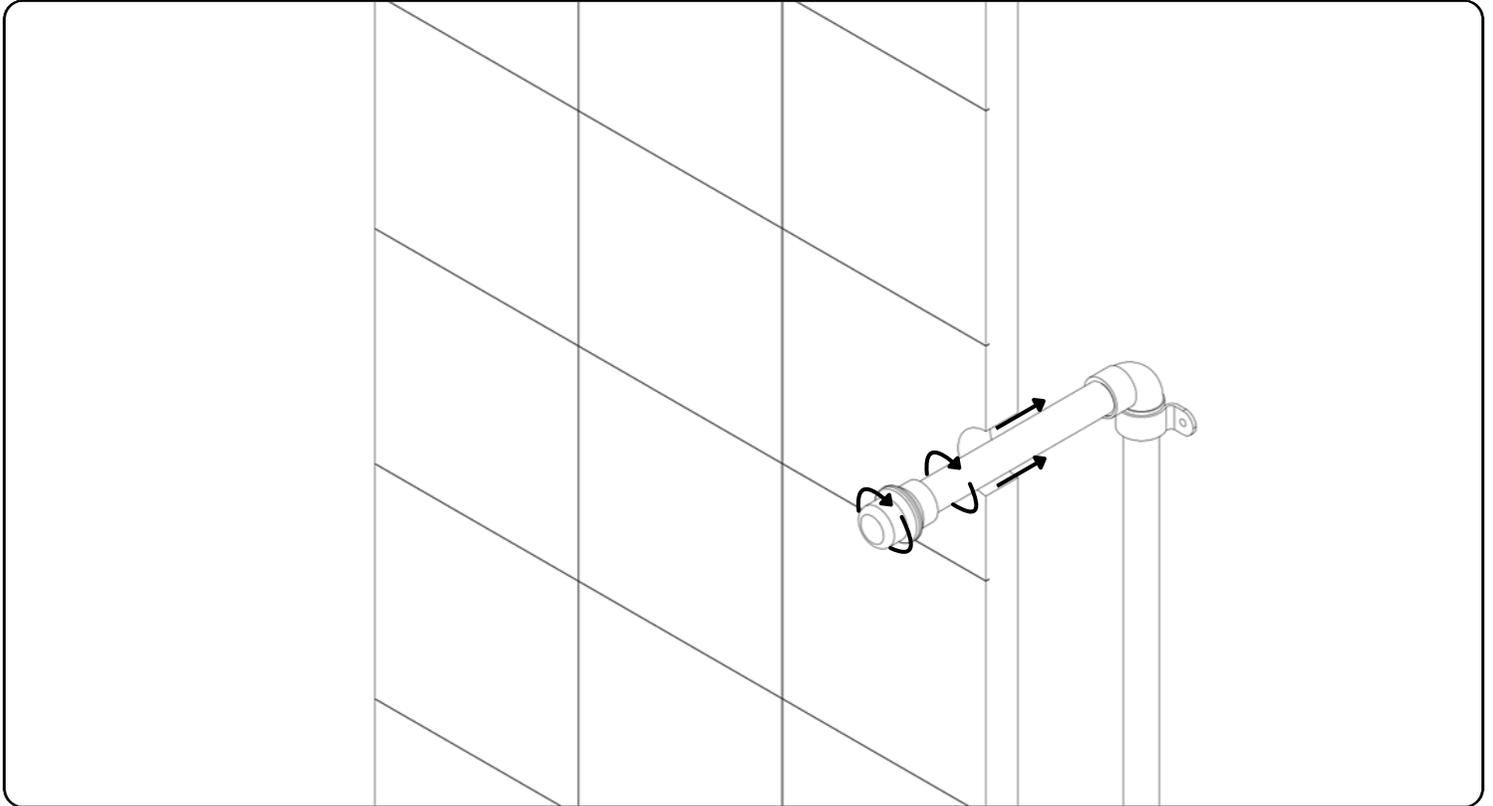

Before beginning, verify that all parts and tools required for installation are available. Review the installation diagram in the parts breakdown at the end of this manual.

Behind the wall, route the mixed water supply line from the control valve to the desired height for the shower arm outlet. Install a **1/2"** female threaded elbow fitting, positioning it so the open end faces outward perpendicular from wall faces. Ensure the outlet of the elbow is a maximum of **2"** from the inside surface of the finished wall to allow adequate space for threading the copper pipe or brass nipple.

Drill a horizontal opening, **1 3/8"** in diameter or smaller, through the wall. Ensure the hole is centered on the supply outlet to accommodate the shower arm connector fitting.

5

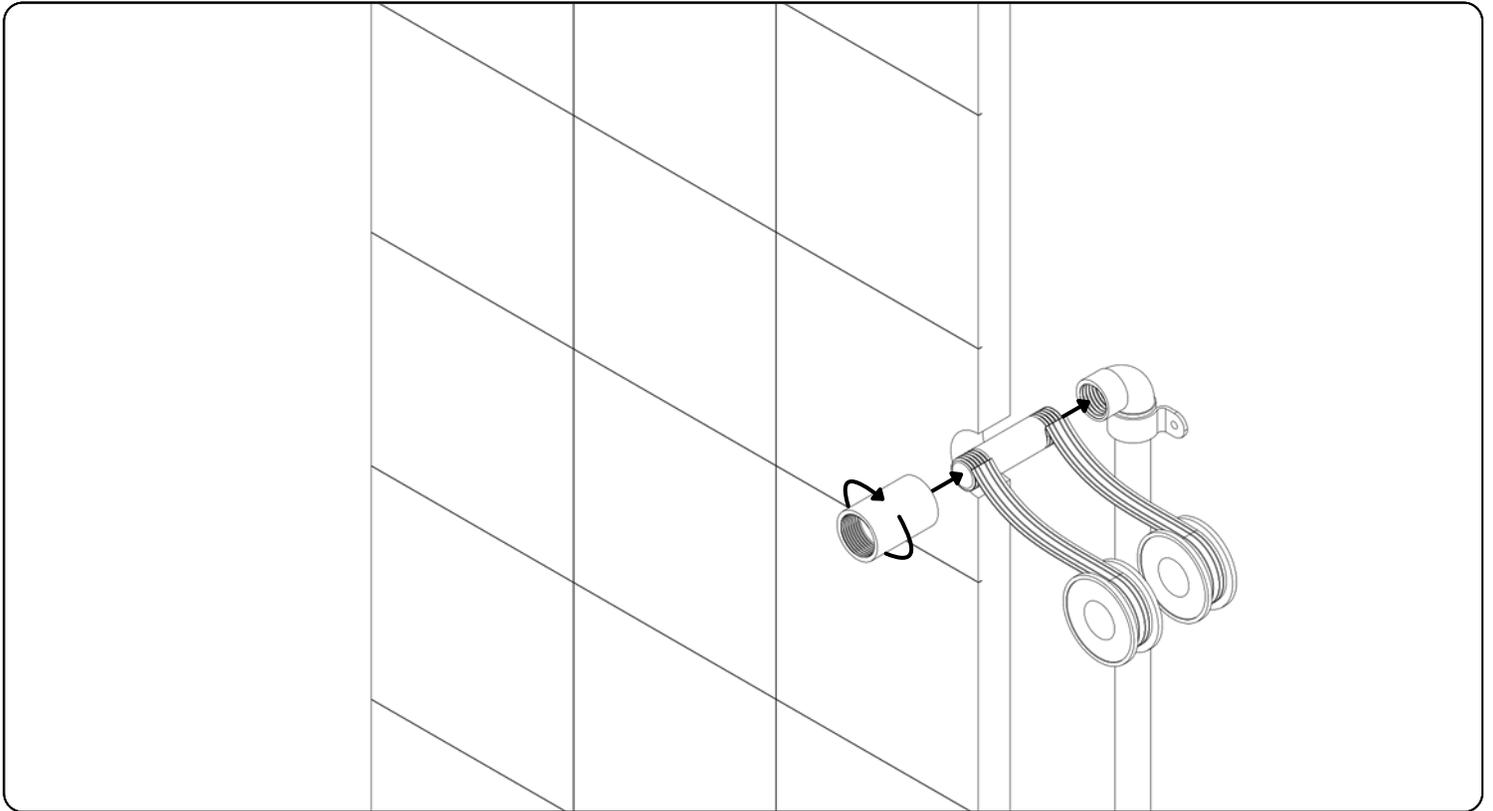

STEP 2

Insert a **temporary** copper stub pipe into the threaded elbow and cap the exposed end. This prevents debris, drywall compound, or tile adhesive from entering the fitting during wall finishing.

Once the surface is complete, remove the temporary pipe and cap.

STEP 3

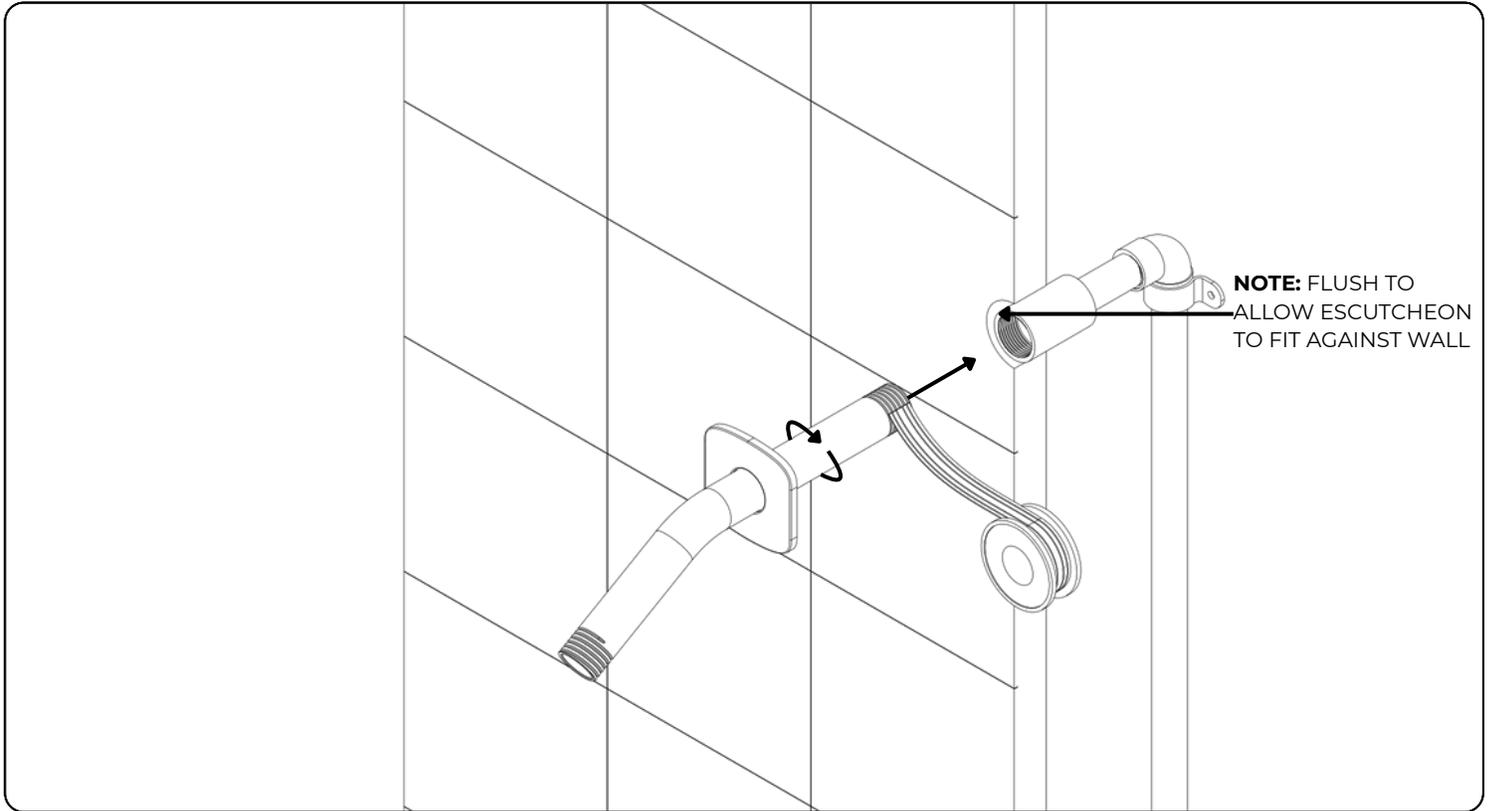

Depending on the mounting of the valve and the positioning of the lines, either thread the arm directly into the elbow fitting or use an extension and a connector.

If using an extension, insert a short section of copper pipe or brass nipple with male **1/2"** NPT threads on both ends into the threaded elbow. Apply plumber's tape (PTFE thread seal tape) to the male threads before installation to ensure a watertight connection. Thread one end of the pipe securely into the elbow fitting behind the wall. Attach a **1/2"** female NPT straight coupling connector to the exposed end of the pipe, applying plumber's tape to the threads. Adjust as needed so that the face of the female connector is flush with the finished wall surface to ensure the escutcheon seats properly during final installation.

Note: Verify that the connector is level and aligned perpendicular to the wall for proper shower arm installation.

STEP 4

Slide the Harmony escutcheon onto the wall-mounted shower arm, with the finished side facing outward. Wrap plumber's tape around the male threads of the shower arm, wrapped 2-3 times to ensure a tight fit. With the shower arm through the escutcheon, thread it into the pipe connector by hand. Tighten until snug, ensuring the arm is oriented correctly, and the escutcheon sits flush against the wall. If additional tightening is needed, use a rubber-jawed wrench to protect the finish.

Once installed, turn on the local water supply (if in a finished or closed state) and check for leaks at the connection.

Note: A thin bead of silicone sealant may be applied around the outer edge of the escutcheon or where the connector fitting meets the wall to help prevent moisture from entering the wall cavity. Allow the sealant to cure according to the manufacturer's recommended drying time before using the shower.

PRODUCT DIMENSIONS

PRODUCT SKU: F901-18

STEP 1

Align the threaded inlet of the shower head with the taped shower arm threads and carefully begin threading the shower head **by hand**. Tighten until snug, ensuring the shower head is straight and properly oriented. If additional tightening is required, use a soft cloth or rubber-jawed wrench to prevent damage to the finish.

Once secured, turn on the water supply and check for leaks at the connection. If any leakage occurs, remove the shower head and check the swivel arm seal to ensure it is in place. If any leak persists, use plumber's tape (PTFE thread seal tape) on a non-viable connection and reinstall.

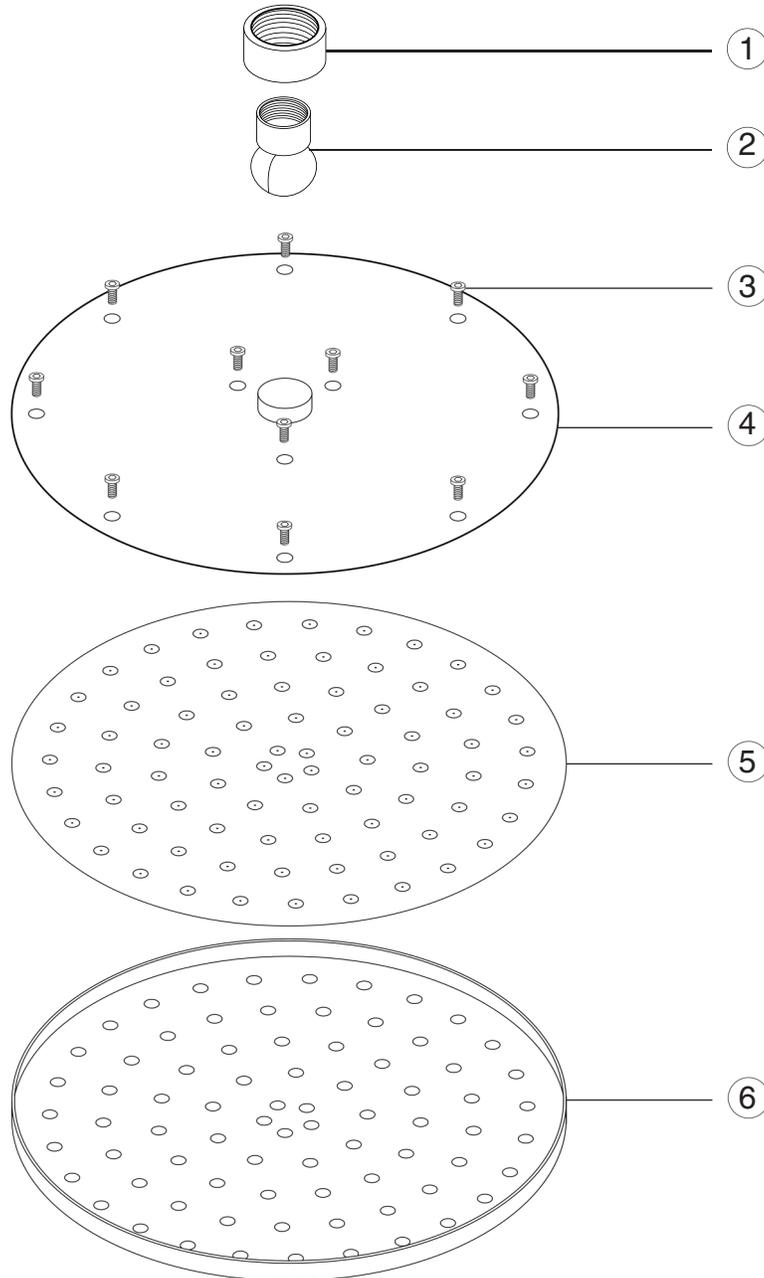

Compatibility: F901-18 is Compatible with all Artos 1/2 NPT threaded arms
