- NOTE 1: For optimum performance of this product, we recommend a system pressure between 20 and 80 PSI static. This product will operate up to a maximum of 125 PSI static per ANSI and CSA requirements. However, we do not recommend pressures above 80 PSI. Thermal expansion or leaking pressure reducing valves may require use of expansion tanks or relief valves to ensure your system never exceeds its maximum intended pressure setting.
- NOTE 2: Control box #0 and trim used with ELAVT0001ARI are designed for routine 171°F (77°C) disinfection cycles up to 30 minutes.
- NOTE 3: Trim used with ELAVT0008ARI are not recommended for high temperature disinfection cycles as the thermostatic mixing valve limits the higher temperature flow output.
- NOTE 3: Control Box #8 is not recommended for high temperature disinfection cycles as the thermostatic mixing valve limits the higher temperature flow output.
