

INSTALLATION INSTRUCTIONS

LARGE BASKET STRAINER

MODEL No's: 121

Recommended installation by a Professional Plumbing Contractor

1. Disconnect and remove existing flange / strainer assembly from drain pipe.
2. Apply putty material between contact surface of drain flange and sink hole. Place the drain flange in sink hole.
3. Tighten flange nut to underside of flange, using o-ring and washer.
4. Attach flange to existing tailpiece drain pipes with slip nut provided.
5. Test seal by engaging strainer into flange and adding water. Make adjustments as required. Remove strainer from flange and drain water from the sink.
