

Installation Instructions

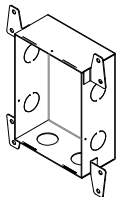

Be sure to protect any existing plumbing lines from frame installation. Follow all applicable plumbing & building codes.

- Frame protects valve(s) from tampering, drywall dust, debris and paint
- Frame is made of 304 stainless steel
- Frame secures firmly to either a SpecBox™ or Ox Box™ product

697 series

Or

696 series

1. Place the frame into box periphery.
2. Screw into place with provided screws.

SpecBox™ installations: set the frame to the box through the pilot holes provided in the box. If new holes are necessary, mark the new hole placement by using the frame as a template and drill 1/16" pilot holes through the box wall to align with frame tabs. Be sure not to drill into plumbed lines. Use provided screws to secure the frame to box.

OxBox™ installations: set the frame to the box by screwing it into place through the pilot holes of the frame. If new holes are necessary to secure the frame to the box, screw through the box sidewall through the frame's mounting tabs. Use provided screws to secure the frame to box.
